

Frixos were appointed to design, manufacture and supply the full architectural metal work package required for this high end development on Kings Street in Chiswick comprising terrace and town houses, residential flats in a four storey apartment block and ground floor commercial units.

A modern build in period style, the Frixos design team worked closely with the developer to achieve the design criteria which remained sympathetic to the building and reflected the styles required. Frixos produced and installed an assortment of juliet balconies, staircases and railings together with a range of other architectural metal work items required for the development.

Since 1978, Frixos has specialised in the design, fabrication and installation of all types of structural and architectural steel work. With an in house team of over 80 experienced and skilled designers, fabricators and installation engineers, we work hand in hand with architects, designers, developers, contractors and other authorities seeking high quality bespoke or innovative metalwork solutions to their project budgets and other specifications.

Based in north London, close to the M25, Frixos serves a wide range of housebuilder, infrastructure and private clients predominately in London and the South East. We place a strong emphasis on service and quality and take pride in the enduring relationships we have built with our clients, suppliers and partners and our ongoing commitment to safety, quality and the development of our people.
